

**A MORE SECURE WORLD :
OUR SHARED RESPONSIBILITY**

High Level First Security System

Integrated Solution For :

- Access Control
- Intrusion Detection
- Alarm Monitoring
- Fire Detection
- CCTV, Digital Video Recording & Retrieval
- Visitor Management
- Transaction Monitoring
- Advanced and Custom Configurations

FIRST Ltd

First Security strives for excellence on every stage from the projects we execute; we make planning & design for the projects, we import and distribute the systems through the country , we install the systems, and finally we provide our customers with maintenance services for all our products.

Our technical working staff is integrated by experienced problem-solving specialists, they are reliable experts on every specific technical solution, and they get periodically updated with the newest technical issues from the field.

Integration

At First Security, we all strive for satisfying customers' needs and developing fruitful business relations with distributors and partners. Only an organization based on a quality commitment, and a team-work spirit can face these challenges. We are all responsible for providing quality products and services.

Security you can rely on

ACCESS CONTROL SYSTEM

The access control system provides a regulated and controlled personal and vehicular traffic at industrial institutions (from small workshops to big factories) and office buildings.

Its work is to prevent the unauthorized entrance into protected areas, and to control personal and vehicular traffic. Through this it is possible to manage the moving direction and location from the employees.

PUBLIC ADDRESSED SOUND SYSTEM

Nowadays it is more and more often, that public addressed sound systems are required in supermarkets, office buildings and halls. Our Sound System offers a wide range of highquality loudspeakers and transformers for the most different application areas.

INTRUSION DETECTION SYSTEM

The property protection market makes progress into the way of complex, multi-directional solutions. Our Intrusion Detection Systems offer full-scale protection for any kind of building. The characteristic feature of our systems is the high-grade interference and breaking-protection. During this occasionally occurring event the constant and full-scale protection can be provided.

Thanks to their free configuration capability these equipments can suit all requirements ; their modular building-up makes them suitable for future enlarging.

FIRE DETECTION SYSTEM

On any kind of building, institution, working area, or entertainment where we spend our lives, there are values and lives which have to be protected. Our fire detection system registers and signalizes the fire already at its breaking-out. These conventional and intelligent systems protect the human life and material values with the reliability from CE standards operation parameters.

SURVEILLANCE SYSTEMS

We can build up the whole CCTV Video Surveillance System, and fit the requirements for most suitable equipment. With the ethernet network capability, not only the camera pictures could be seen from anywhere (through the Internet), but the data retrieval, camera motion, and even the system's configuration could be also remotely manipulated. Thanks to the optional variable recording and display mode; video surveillance operation could be optimized, and most of the pictures displayed on the monitor could be saved. If the DVR is connected with other security systems, so it can forward or receive signals from the alarm systems, motion detectors, and PTZ dome cameras. This system could be integrated, so recording from certain camera pictures upon a specific alarm signal could be done.
